Subject: [External] Comments for Docket 2019-224-E and 2019-225-E Reject Duke's IRPs

Dear South Carolina PSC,

It is important that you reject Duke Energy's 2020 Integrated Resource Plan (IRP) in NC.

Duke's IRP continues dependence on coal, falsely claiming we lack clean energy technology. This approach interferes with the vital goal of 100% renewable energy by 2050, and values profits above people and the planet we all share.

Duke is ignoring the research that has established solar power as the cleanest and most cost-effective energy choice. This short changes all of us in NC. We are looking toward the jobs, safety, and health that renewable energy provides, and looking to the commission for ethical leadership on this issue.

Please put clean energy and all the benefits it brings at the forefront of your decision and reject Duke's IRP.

Sincerely,
Christine Hoepfner
